Version: 0.1

1 Before Working

(1)   *See that there is an SD card in the slot before booting.*

(2)   *Verify the power situation, and power on the computer.*

(3)   *Click on "Balsa User," enter password "balsabalsa" and click "Log in."*

(4)   *Plug in flash drive.*

(5)   *Close windows by clicking on the X.*

(6)   *Open WeSay, select language project, and click "OK."*

   If your language isn't there, select "Settings" tab, then "WeSay Config", "OK", then "Get From USB drive."

(7)   *Click on "Home", then "Share" Send/Recieve (bottom row, with two arrows), then "USB Flash Drive." When it finishes ("Done"), close the window (click on X).*

   If it says "First insert a USB Flash Drive", close WeSay, remove flash drive, and return to step (4).

(8)   *Work: "Gather" SIL-CAWL or Semantic Domains first.*

2 After Working

(9)   *Click on "Home", then "Share" Send/Recieve (bottom row, with two arrows), then "USB Flash Drive." When it finishes ("Done"), close the window (click on X).*

   If it says "Insert Flash Drive", close WeSay, remove flash drive, and return to step (4).

(10)   *Shut down Wesay (Click on X in upper right).*

(11)   *Shut down computer (Move the mouse to the very bottom of the screen and Click on the box in lower right "Quit", then "shutdown").*

(12)   *Remove flash drive.*
